Technical parameters

Construction method: Special spray. Flat spot, need to be flattened.
Dilution ratio: In addition to water, due to construction difficulties, may be subject to additional 3% less than clear water dilution.
Construction requirements: 5℃ -35℃ and relative humidity below 80% construction. Construction of wind, rain and other inclement weather should be avoided.

注意事项：

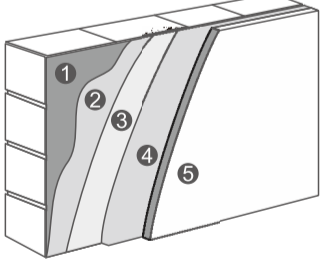

由于是厚质涂层，涂层实际干燥时间较长，夏、秋季2天以上；春、冬季3天以上，方可涂刷水性面漆。如要在中层料上涂刷油性等致密面漆时，必须确保中层料是安全干燥的（含水率≤10%）。为此，建议夏、秋干燥4天为宜；春、秋季干燥6天为宜，否则可能因中层料所含水份的蒸发产生向外推力，引起面漆起鼓现象。

Notes:

Because it is a thick coating, coating the actual drying time is longer in summer and autumn for more than 2 days; for more than 3 days in spring and winter, water before brushing a topcoat. To brushing oil on the Middle material such as tight when you finish, you must ensure that the intermediate material is safe and dry (moisture content ≤ 10%). For this reason, it is recommended that summer and autumn dry for 4 days; drying for 6 days in spring and autumn is appropriate, otherwise it may be Middle material resulting from the evaporation of the water contained thrust outward, causing paint played drums.
